

Necip Sayiner
President and Chief Executive Officer

Necip Sayiner serves as Silicon Laboratories president and chief executive officer and is a member of the board of directors. Necip joined Silicon Laboratories in September 2005 and he brings to the company a strong mix of deep technical expertise in mixed-signal technologies and a proven capability to manage and grow large, diversified businesses.

Prior to joining Silicon Laboratories, Necip had a very fast rise within management at Agere Systems, where the 40 year old was vice president and general manager of the approximately \$450 million Enterprise and Networking division. Necip established a track record of successful product execution, improvements in operational performance, and growth initiatives with aggressive new product introductions. Necip's ability to transform mature, legacy-oriented businesses to growth-oriented, highly profitable enterprises was a key factor in his success as the vice president and general manager of Agere's Networking IC division. Necip also held several senior design management roles and he holds multiple patents related to data detection schemes.

Necip is married with three children, and spends much of his personal time with his family. He enjoys traveling, basketball, and tennis.

Necip holds a bachelor's degree in electrical engineering and physics from Bosphorus University in Turkey. He holds a master's degree in electrical engineering from Southern Illinois University and a doctorate in electrical engineering from the University of Pennsylvania.
