in Iraklis Anagnostopoulos

Research Interests

Machine Learning: Hardware/software co-design; Approximate computing; Heterogeneous AI accelerators; Neural network optimizations. **System optimization:** Performance/power modeling; Memory management; Runtime management; **Edge & IoT Systems:** Edge-cloud orchestration; Real-time systems; Embedded AI; Cyber-physical systems.

Academic Employment

- 07/2024 - **Faculty Fellow**, Southern Illinois University Carbondale, USA.
Present Office of Vice Chancellor for Research.
Assisting the development of large, complex research grant applications.
Identifying and connecting with appropriate funding agencies.
- 05/2021 - **Associate Professor**, Southern Illinois University Carbondale, USA.
Present School of Electrical, Computer & Biomedical Engineering.
Director of the Embedded Systems Software Lab.
- 08/2015 - **Assistant Professor**, Southern Illinois University Carbondale, USA.
05/2021 School of Electrical, Computer & Biomedical Engineering.
Director of the Embedded Systems Software Lab.

Professional Employment

- 07/2013 - **CEO and founder**, R.D. Software LLC, Greece.
- 07/2015 Start-up focused on acceleration of memory operations for servers.

Education

- 10/2008 - **Doctor of Philosophy in Electrical and Computer Engineering**, National Technical University of Athens, Athens, Greece.
02/2014 Thesis: Run-time resource management and application customization for many-core embedded platforms.
Advisor: Dimitrios Soudris, Microprocessors and Digital Systems Lab.
Committee: Axel Jantsch, Dimitris Gizopoulos, Kiamal Pekmestzi, Nektarios Kozyris, George Economakos, and Ioannis Papaefstathiou.
- 09/2008 **Diploma (Master of Science in Engineering) in Electrical and Computer Engineering**, National Technical University of Athens, Athens, Greece.
Thesis: Quality of Service (QoS) techniques on Network-on-Chip (NoC).
Advisor: Dimitrios Soudris, Microprocessors and Digital Systems Lab.
Committee: Kiamal Pekmestzi and George Economakos.

Publications

My own name appears in boldface. Graduate students that I supervise/ed appear in boldface and underlined. Undergraduate students that I supervise/ed appear in boldface and double underlined. The names of industrial collaborators are indicated with †.

Awards/Honors

- **Outstanding Teacher of the Year Award** in the School Electrical, Computer and Biomedical Engineering, Southern Illinois University Carbondale, 2025.
- **College Rising Star Faculty Award** in the College of Engineering, Computing, Technology and Mathematics, Southern Illinois University Carbondale, 2024.
- **Outstanding Teacher of the Year Award** in the School of Electrical, Computer and Biomedical Engineering, Southern Illinois University Carbondale, 2024.
- **Best Paper Award** for our work *Automated Energy-Efficient DNN Compression under Fine-Grain Accuracy Constraints*, Design, Automation, and Test in Europe Conference (DATE), 2023.
- Our journal *A Pressure-Aware Policy for Contention Minimization on Multi-core Systems*, *ACM Transactions on Architecture and Code Optimization*, was selected by the ACM TACO Editorial Board as invited talk to HiPEAC 2023 conference, 2023
- **Outstanding Teacher of the Year Award** in the Department of Electrical & Computer Engineering, Southern Illinois University Carbondale, 2018.
- *Distributed Run-time Management for Multi-agent Systems* was Selected by NSF to be part of the “Industry-Nominated Technology Breakthroughs”, 2016.
- HiPEAC Paper Award: Design Automation Conference, Austin, Texas, 2013.
- 3rd Best paper award: 4th National Conference of Electrical and Computer Engineering, 2010, Patra, Greece.
- HiPEAC Grant for HiPEAC summer school, Barcelona, Spain, 2009.

Extramural Research Grants

○ Active

09/2023 - **DESC: Type I: Towards Greener AI Computing: Designing and Managing Sustainable**
08/2026 **Heterogeneous Edge Data Centers, PI: I. Anagnostopoulos; co-PI: S. Tragoudas.** Funding source: NSF. **Total amount: \$587,749.**

Brief Description: This project is designed to significantly enhance the sustainability of edge data centers specialized in AI computing. Utilizing a comprehensive, carbon-first vertical approach, the project will address multiple levels of optimization. We will develop robust hardware accelerators that are energy-efficient, and also implement system-level improvements aimed at better power usage and strategic workload distribution. Additionally, renewable energy sources will be integrated into the management of these edge data centers. The ultimate goal is not only to reduce the overall carbon footprint through operational and embodied efficiencies but also to shift towards a more localized, renewable energy-based infrastructure. This holistic approach aims to pave the way for a new standard in energy-efficient, sustainable data center operations..

○ Completed

12/2022 - **Collaborative Research: CyberTraining: Pilot: Research Workforce Development for**
11/2024 **Deep Learning Systems in Advanced GPU Cyberinfrastructure, PI: Dr. S. Tong; co-PI: I. Anagnostopoulos, Dr. R. Li.** Funding source: NSF. **Total amount: \$201,262.**

Brief Description: With the recent advancements in artificial intelligence, deep learning (DL) systems and applications have become a driving force in multiple transdisciplinary domains. Meanwhile, this evolution has been supported by the rapid improvements of advanced GPU cyberinfrastructure (CI). Thus, DL system and application researchers need to constantly acquire interdisciplinary knowledge on advanced GPU CI. However, existing training materials are not only separately designed for a single aspect, either GPU CI or DL systems and applications, but also mainly focused on traditional techniques lagging behind quickly developed GPU CI and DL systems. To fill in this blank and overcome these difficulties, this project will develop a novel set of interactive training materials by involving six faculty members from five academic disciplines including computer science, computer engineering, data science, geospatial information science, and aerospace engineering.

01/2022 - **Enhancing synergistic execution of neural networks with joint pruning and mixed precision quantization, Single PI: I. Anagnostopoulos**, *Funding source: NSF I/UCRC Consortium for Embedded Systems (CES)*. Main supporting CES industry member: Ford Motor Company. **Total amount: \$50,000.**

Brief Description: Chip multiprocessors (CMPs) have become dominant in the automotive industry as they accommodate an increasing amount of cores in order to satisfy the increasing demands of the complicated services provided by modern vehicles. Additionally, heterogeneity has been introduced to combine performance and functional divergent offering significant computing power with more flexible power-performance trade-offs. As more and more services depend on concurrent execution of multiple neural networks, this multi-application execution environment on modern systems creates interference delays leading in violation of time constraints. In this project, we will extend the framework for synergistic execution developed last year, to further optimize the execution of neural networks by supporting joint pruning and mixed precision quantization.

01/2022 - **Determinism of Critical Tasks on Multi-Core Platforms in the Presence of PHM Data Operations (project continuation), PI: I. Anagnostopoulos; co-PI: D. Kagaris**, *Funding source: NSF I/UCRC Consortium for Embedded Systems (CES)*. Main supporting CES industry member: Collins Aerospace. **Total amount: \$50,000.**

Brief Description: Prognostics and health management (PHM) data are collected on site but have to be eventually off-loaded to the cloud for further processing for predictive maintenance purposes. At the same time, the controllers of the system components should continue their operation unaffected by the PHM data collection and transmission. In this project, we plan to extend the framework built in the previous years in order to support more sophisticated functions and benchmark the effect of different services. Particularly, we will focus on the investigation of different FreeRTOS versions and compare their deterministic behavior against Linux with real-time kernel over a bare-metal hypervisor.

01/2021 - **Enhancing vehicular applications using adaptive and synergistic resource management, Single PI: I. Anagnostopoulos**, *Funding source: NSF I/UCRC Consortium for Embedded Systems (CES)*. Main supporting CES industry member: Ford Motor Company. **Total amount: \$50,000.**

Brief Description: Chip multiprocessors (CMPs) have become dominant in the automotive industry. Additionally, heterogeneity has been introduced to combine performance and functional divergent offering significant computing power with more flexible power-performance trade-offs. As more and more services depend on concurrent execution of multiple neural networks, this multi-application execution environment on modern systems creates interference and delays leading in violation of time constraints. In this project, we will investigate and develop a service oriented architecture in order to allow synergistic resource management of neural networks on heterogeneous CMPs.

- 01/2021 - **Heterogeneity-aware orchestration and efficient utilization of modern many-core systems,**
12/2021 **Single PI: I. Anagnostopoulos, Funding source: NSF I/UCRC Consortium for Embedded Systems (CES).** Main supporting CES industry member: Intel. **Total amount: \$50,000.**
Brief Description: When applications run concurrently on a CMP, they compete for shared resources, such as Last Level Cache (LLC) and main memory bandwidth. Conventional design approaches and industry trends are application agnostic. They mostly try to maximize consistency offering generic solutions and ignoring the requirements of diverse applications. In this project, we propose a two-step methodology to orchestrate the executing and resource allocation of modern CMPs. The goal of the first step is to estimate the performance of different applications on platform with different architecture, while avoiding exhaustive application profiling. The second step focuses on the automatic generation of performance estimators and resource allocation policies to be integrated into the scheduler so as to maximize the system utilization for specific workloads.
- 01/2021 - **Determinism of Critical Tasks on Multi-Core Platforms in the Presence of PHM Data**
12/2021 **Operations, PI: I. Anagnostopoulos; co-PI: D. Kagaris, Funding source: NSF I/UCRC Consortium for Embedded Systems (CES).** Main supporting CES industry member: Collins Aerospace. **Total amount: \$50,000.**
Brief Description: Prognostics and health management (PHM) data are collected on site but have to be eventually off-loaded to the cloud for further processing for predictive maintenance purposes. At the same time, the controllers of the system components should continue their operation unaffected by the PHM data collection and transmission. In this proposal, which is based on the infrastructure that we have already built in the 2019 project, we investigate the effect of different multi-core configurations to provide PHM capability to an embedded system without impacting its performance. Additionally, we will explore the impact of data management services (e.g., encryption, compression, filtering) to the overall deployment in terms of deterministic behavior.
- 05/2019 - **Modular and scalable infrastructure for the SIUC campus, PI: S. Tragoudas; co-PIs: I.**
06/2021 **Anagnostopoulos, A. Baduge, C. Hatziaioniu, A. Komae, H. Wang, Funding source: Illinois Environmental Agency/US Department of Energy. Total amount: \$1,008,000 (\$900,000.00 from the IEPA/USDOE and \$108,000.00 matching from SIUC).**
Brief Description: Implement a scalable infrastructure consisting of photovoltaic (PV) panels and energy storage units to generate electricity in normal conditions and function as a backup power source in case of electricity outage. In the events of power outage, it will sustain the operation of a computing and control room in Engineering Building E as well as a wireless communication infrastructure. With this infrastructure and data obtained from its operation, the project intends to demonstrate that PV systems with energy storage provide a viable alternative to traditional diesel powered generators when selecting backup power sources for small-scale applications. In addition, the project will develop solar powered LTE communication modules to sustain cellular communication for emergency responders in the events of natural disasters that cause outages of both power and cellular service.

- 01/2020 - **Real-time Deep Learning System on FPGA platforms for Autonomous Vehicle Applications**, *PI: H. Wang; co-PIs: I. Anagnostopoulos, S. Tragoudas, Funding source: NSF I/UCRC Consortium for Embedded Systems (CES)*. Main supporting CES industry member: Ford Motor Company. **Total amount: \$50,000.**
 12/2020 **Brief Description:** This project investigates benefits and challenges on implementing deep learning algorithms on state-of-the-art FPGA and GPU hardware platforms for real-time image classifications for autonomous vehicle applications. The two platforms will be compared in terms of toolchain complexity, inference accuracy, throughput, and power consumption.
- 08/2019 - **Enhancing and Protecting Vehicular Applications Using Isolation and Adaptive Offloading**,
 07/2020 **Single PI: I. Anagnostopoulos**, *Funding source: NSF I/UCRC Consortium for Embedded Systems (CES)*. Main supporting CES industry member: Ford Motor Company. **Total amount: \$50,000.**
Brief Description: The focus of this project is to develop techniques for enhancing and protecting vehicular applications using isolated application execution combined with transparent and adaptive task offloading. The first pillar is the application isolation in order to increase performance and meet time-requirements of automotive services. The second pillar is the trade-off estimation of task offloading as a way to further enhance quality of service, while the third pillar is the isolation of the applications increasing data integrity. The overall goal is to develop a unified design methodology and framework that will speed up and secure the content delivery and analysis process at the vehicle edge by using process isolation and task offloading.
- 08/2019 - **Enhancing QoS of Mixed Criticality Workloads on Modern Many-core Systems**, **Single**
 07/2020 **PI: I. Anagnostopoulos**, *Funding source: NSF I/UCRC Consortium for Embedded Systems (CES)*. Main supporting CES industry member: Intel. **Total amount: \$50,000.**
Brief Description: The fact that cores share architectural components, such as caches and memory controllers, results in severe performance degradation. State-of-art approaches balance the applications' accesses to the shared resources by splitting equally the CPU time. Even though this policy is fair regarding the CPU time that each application gets, it does not take into consideration any contention effects that affect their performance. The focus of this project is to develop a four-step approach in order to (i) offer QoS guarantees by ensuring that high priority tasks and applications have minimal interference, and (ii) investigate the limitations of different Intel processor microarchitectures in order to offer such QoS guarantees.
- 08/2019 - **Prognostics and Health Management (PHM)-Enabled Real-Time Embedded Architectures**, *PI: I. Anagnostopoulos; co-PI: D. Kagaris, Funding source: NSF I/UCRC Consortium for Embedded Systems (CES)*. Main supporting CES industry member: Collins Aerospace. **Total amount: \$50,000.**
 07/2020 **Brief Description:** Machinery (whether used in airplanes, automobiles, industrial machines, etc.) is inevitably subject to wear and needs to be maintained. Corrective maintenance, in which a component is replaced only after it has failed, is inapplicable/unacceptable in many cases where failures are catastrophic. Data-driven predictive maintenance is the smart way to do maintenance, but the collection of the PHM data should interfere the least with the controllers' operation. The effect of different multicore architectures (core assignment, partition assignment) to provide PHM capability to an embedded system without impacting its performance need to be investigated.

04/2019 - **Parameter exploration and adversarial learning on Loihi**, *PI: I. Anagnostopoulos; co-PI: S. Tragoudas; Funding source: Intel. Access to the Intel Loihi Development System (direct and remote access)*

Brief Description: Classification accuracy and the effectiveness of certain adversarial learning approaches depend on the underlying hardware platform because many automotive applications impose power dissipation and performance constraints. Certain hyperparameters relate directly to power and performance. In particular, the number of neurons per layer when coupled with the number of layers relates to power dissipation, while the number of layers relates to performance. Therefore, training algorithms will consider constraints on these hyperparameters in order to satisfy power and performance constraints. In order for the proposed approach to be effective in classification accuracy and also in design time efficiency, accurate platform-specific models must be developed to estimate power and delay per neuron. We will also investigate whether optimum solutions should be proposed directly on SNN or proceed as in and first derive an optimum CNN topology and then map it to SNN.

08/2018 - **Impact of Artificial Neural Network architectures on autonomous driving**, **Single PI: I. Anagnostopoulos**, *Funding source: NSF I/UCRC Consortium for Embedded Systems (CES). Main supporting CES industry member: Ford Motor Company. Total amount: \$50,000.*

Brief Description: The rapid growth of on-vehicle multi-sensor inputs along with off-vehicle data streams provides an opportunity for developing innovative applications and services for modern vehicles. Autonomous cars employ hundreds of sensors for situational and environmental information and in order to integrate such services, new programming models and hardware infrastructure have been introduced. From the application perspective, machine learning algorithms have been utilized in order to further enhance the decision making process of autonomous vehicles. Image, speech and data classification are some examples where Artificial Neuron Networks (ANNs) prevail as the solution due to the complexity of the problem. In this project, we investigate the trade-offs of modern ANNs on embedded devices and the integration of neuromorphic platforms in smart cars.

08/2017 - **Service oriented architecture and application optimizations for smart cars**, **Single PI: I. Anagnostopoulos**, *Funding source: NSF I/UCRC Consortium for Embedded Systems (CES). Main supporting CES industry member: Ford Motor Company. Total amount: \$40,000.*

Brief Description: Modern cars employ hundreds of sensors for situational and environmental information and in order to integrate such services, new programming models and hardware infrastructure have been introduced. The project focuses on application optimization and development of service-oriented communication for seamless integration with regular automotive systems. Specifically, interfaces are being developed that will allow the communication of RTOS-based systems with more sophisticated software architectures and tools.

08/2016 - **Internet-of-Things Applications Development for private LTE small-cell networks**, *PI: I. Anagnostopoulos*; *co-PI: A. Baduge*, *Funding source: NSF I/UCRC Consortium for Embedded Systems (CES)*. Main supporting CES industry member: Lemko Corporation. **Total amount: \$35,000.**

Brief Description: We are witnessing the dawn of a new era of Internet of Things (IoT; also known as Internet of Objects). Generally speaking, IoT refers to the networked interconnection of everyday objects, which are often equipped with ubiquitous intelligence. Smart building, self-driving cars, house monitoring and management, city electricity and pollution monitoring are some examples where dynamic networked real-time systems are deployed. This bloom of dynamic networked devices was also a result of new network services. With lower latency and higher bandwidth than its predecessor 3G networks, the latest cellular technology 4G LTE has been attracting many new users. However, the interactions among applications and network transport protocol still remain unexplored. In this project, we propose methodologies for interfacing, controlling and monitoring IoT devices in industrial settings over private LTE small-cell networks over 3.65 GHz frequency band.

08/2016 - **Environmental information and multi-sensor data fusion based performance estimations for smart cars**, **Single PI: I. Anagnostopoulos**, *Funding source: NSF I/UCRC Consortium for Embedded Systems (CES)*. Main supporting CES industry member: Ford Motor Company. **Total amount: \$50,000.**

Brief Description: The rapid growth of on-vehicle multi-sensor inputs along with off-vehicle data streams provides an opportunity for innovation in real-time decision making. The development of new advanced sensors is not sufficient enough without the utilization of enhanced signal processing techniques such as the data fusion methods. Multi-sensor data fusion (MSDF) is the process of combining or integrating measured or preprocessed data or information originating from different active or passive sensors. In this project, we develop and explore state-of-art data fusion techniques for decision making for automotive applications. Specifically we combine the benefits offered by car's increased connectivity (e.g. Internet, cloud services) with on-vehicle sensor information for providing detailed information about the state of the car and the environment.

08/2015 - **Distributed Run-time Management for Multi-agent System**, **Single PI: I. Anagnostopoulos**, *Funding source: NSF I/UCRC Consortium for Embedded Systems (CES)*. Main supporting CES industry member: Ford Motor Company. **Total amount: \$50,000.**

Brief Description: Today's prevalent solutions for modern multi-agent systems employ many processing inter-connected units leaving behind complex centralized approaches. Especially in modern automotive systems where high numbers of electronic components are employed. Navigation, car security, infotainment, travel information etc. are services highly depended on modern computing systems. In this project, we couple the concept of multi-agent systems with run-time resource management techniques in order to develop a distributed framework for run-time management of multi-agent systems.

- **Completed research programs**, research assistant, National Technical University of Athens, Athens, Greece.

- 03/2015 - **AEGLE: An Analytics Framework for Integrated and Personalized Healthcare Services in Europe.** H2020-ICT-2014-1. Researcher: Defining system requirements and scenarios of use.
07/2015 **Partners:** Exodus, S.A., Institute of Communication and Computer Systems, Kingston University Higher Education Corporation, Centre for Research and Technology Hellas, MAXELER Technologies, Uppsala University, University Vita-Salute San Raffaele, TML, Erasmus Universiteit Rotterdam, Croydon Health Services NHS Trust, LOBA, University Hospital of Heraklion, Gnubila.
- 01/2011 - **TOISE: Trusted Computing for European Embedded Systems.** IST-282557-2. Principal
03/2014 Researcher: Responsible for dynamic memory management in trusted computing platforms.
Partners: THALES, STMicroelectronics (Rousset), GEMALTO SA, CEA Leti, EADS CASSIDIAN SAS, EADS France Innovation Works SAS, Institut Telecom ParisTech, Secure-IC, Magillem Design Systems, STMicroelectronics Srl, AZCOM Technology, Politecnico di Milano, Numonyx Srl, Università di Milano Bicocca, Proton World International NV, Hellenic Aerospace Industry, Institute of Communication and Computer Systems, Agencia Consejo Superior de Investigaciones Científicas, Tecnologías Servicios Telemáticos y Sistemas S.A., Universidad de Cantabria.
- 03/2010 - **2PARMA: Parallel Paradigms and Run-time Management Techniques for Many-core Architectures.** FP7-ICT-2009-4-248716. Researcher: Responsible for run-time resource management in multi-core platforms. Workpackage 4: Run-Time Management.
12/2012 **Partners:** Politecnico di Milano, STMicroelectronics, Fraunhofer Institut for Telecommunications / Heinrich-Hertz Institut, IMEC, Institute of Communication and Computer Systems, RWTH Aachen University, CoWare.
- 01/2008 - **MNEMEE: Memory Management Technology for Adaptive and Efficient Design of Embedded Systems.** IST-216224. Researcher: Responsible for dynamic memory management in embedded systems. Workpackage 2: Source-to-Source Optimizations of Dynamically Allocated Data Mapping on MPSoC Platforms.
12/2010 **Partners:** IMEC, NTUA, Technical University of Eindhoven, Informatik Centrum Dortmund e.V., Intracom, THALES.
- 09/2009 - **Invited Researcher, KTH Royal Institute of Technology, Stockholm, Sweden.** Build a dynamic
12/2009 memory management library in microcode targeting performance efficiency..
- 09/2008 - **MOSART: Mapping Optimization for Scalable multi-core ARchiTecture.** IST-215244.
12/2009 Researcher: Responsible for dynamic memory management for DSM platforms. Workpackage 2: Data Storage Optimization and Middleware.
Partners: THALES, NTUA, KTH, IMEC, VTT, Intracom, Coware, Arteris.

Students

Current Ph.D. students

- Varatheepan Paramanayakam (Full time student since Fall 2024)
Research: *Optimization of Multi-DNN workloads.*
- Aikaterini Maria Panteleaki (Full time student since Fall 2023)
Research: *Improving sustainability in AI.*

Graduated Ph.D. students

- Andreas Karatzas
Dissertation: *Orchestrating Multi-Objective Neural Network Deployment in Heterogeneous Edge Systems.*
First placement: AMD, USA
- Shivam Kundan
Dissertation: *Resource-Optimized Scheduling for Enhanced Power Efficiency and Throughput on Chip Multi-Processor Platforms.*
- Ourania Spantidi
Dissertation: *Resource-aware Optimization Techniques for Machine Learning Inference on Heterogeneous Embedded Systems.*
First placement: Tenured-track Assistant Professor, Eastern Michigan University, USA
- Zois Gerasimos Tasoulas
Dissertation: *Resource Management and Application Customization for Hardware Accelerated Systems.*
First placement: NVIDIA, USA
- Ioannis Galanis
Dissertation: *Resource management in edge computing for Internet of Things.*
First placement: Intel, USA
- Theodoros Marinakis
Dissertation: *Enhancing Fairness And Performance On Chip Multi-processor Platforms With Contention-aware Scheduling Policies.*
First placement: NVIDIA, USA

Graduated M.Sc. students

- Nimmi Regmi
Thesis: *Real-Time Fault Detection and Classification in Radial Power Distribution Network using DNNs*
First placement: CMTA, USA
- Benjamin Trewin
Thesis: *Architecture and Mapping co-exploration of Neural Networks on Embedded Devices*
First placement: Texas Instrument, USA
- Anish Ghimire
Thesis: *Optimization of asymmetric many-core systems.*
First placement: Qualcomm, USA
- Shraddha Dahal
Thesis: *Synergistic execution of Neural Networks on modern embedded systems.*
First placement: Qualcomm, USA
- Saroj Sapkota
Thesis: *Efficient Resource Management on Embedded Devices Via Isolation and Adaptive Resource Allocation.*
First placement: Intel, USA
- Jonathan Dickerson
Thesis: *Supporting Approximate Computing on Coarse Grained Re-configurable Array Accelerators.*
- Srinivasa Reddy Punyala
Thesis: *Throughput Optimization and Resource Allocation on GPUs under multi-application execution.*

- Sai Saketh Nandan Perala
Thesis: *Efficient Resource Management for Video Applications in the Era of Internet-of-Things (IoT)*.
First placement: Fiat Chrysler Automobile, USA
- Jayasimha sai Koduri
Thesis: *Simple Pool Architecture for Application Resource Allocation in Many-Core Systems*.
First placement: Qualcomm, USA
- Daniel Olsen
Thesis: *Performance-Aware Resource Management of Multi-Threaded Applications for Many-Core Systems*.
First placement: Boeing, USA
- Mohammad Essa Mohammad
Thesis: *Distributed Run-Time and Power Constraints Mapping for Many-Core Systems*.

Ph.D. Thesis committee member

- Argyrios Kokkinis, School of Physics, Aristotle University of Thessaloniki, Greece, 2025. Chair: Dr. K. Siozios. *Dissertation: Design Methodologies for Sustainable Hardware Acceleration at the Edge*.
- Anup Biswas, School of Electrical, Computer and Biomedical Engineering, SIU, 2024. Chair: Dr. D. Kagari. *Dissertation: Reducing Transistor Count in CMOS Logic Design Through Clustering, Superclustering, and SOP Splitting*.

Mentor in Senior design projects

- *Voice-activated Home Automation System using Natural Language Processing, 2023-24.*
- *Dashboard for data analytics on SIU infrastructure, 2020-21.*
- *Boeing senior design group, 2020-21.*
- *Park EZ, 2019-20.*

- *Boeing senior design group, 2019-20.*
- *Analyze basketball game and provide statistics with augmented reality, 2018-19.*
- *Face detection in augmented reality, 2017-18.*
- *Video streaming over HoloLens, 2017-18.*
- *HoloLens Internet-of-Things Smart Room, 2017-18.*
- *Microsoft HoloLens Virtualized environment, 2016-17.*
- *Voice-Controlled Autonomous Vehicle, 2015-16.*
- *Integrated Surface Vehicle Design Challenge, 2015-16.*

Teaching

- Fall 2024 Instructor undergraduate course “*ECE 511 - Software/Hardware Co-Design for Deep Neural Networks*”, Graduate course, School of Electrical, Computer and Biomedical Engineering, SIU. Evaluation: Course: 4.79/5, Instructor: 4.86/5, Responses: 14/20.
- Fall 2024 Instructor undergraduate course “*ECE 411 - Software/Hardware Co-Design for Deep Neural Networks*”, Undergraduate course, School of Electrical, Computer and Biomedical Engineering, SIU. Evaluation: Course: 5/5, Instructor: 4.8/5, Responses: 5/9.
- Fall 2024 Instructor undergraduate course “*ECE 321 - Introduction to Software Engineering*”, Undergraduate course, School of Electrical, Computer and Biomedical Engineering, SIU. Evaluation: Course: 4.75/5, Instructor: 4.75/5, Responses: 4/16.
- Fall 2023 Instructor graduate course “*ECE 532 - Programming for Parallel Processors*”, Graduate course, School of Electrical, Computer and Biomedical Engineering, SIU. Evaluation: Course: 4.67/5, Instructor: 4.67/5, Responses: 3/4.
- Fall 2023 Instructor undergraduate course “*ECE 432 - Parallel Programming*”, Undergraduate course, School of Electrical and Computer Engineering, SIU. Evaluation: Course: 5/5, Instructor: 5/5, Responses: 3/4.
- Fall 2023 Instructor undergraduate course “*ECE 321 - Introduction to Software Engineering*”, Undergraduate course, School of Electrical, Computer and Biomedical Engineering, SIU. Evaluation: Course: 5/5, Instructor: 5/5, Responses: 3/8.
- Spring 2023 Instructor undergraduate course “*ECE 536 - Embedded Systems*”, Graduate course, School of Electrical, Computer and Biomedical Engineering, SIU. Evaluation: Course: 4.75/5, Instructor: 5/5, Responses: 4/7.
- Spring 2023 Instructor undergraduate course “*ECE 517 - Edge Computing*”, Graduate course, School of Electrical, Computer and Biomedical Engineering, SIU. Evaluation: Course: 4.67/5, Instructor: 4.5/5, Responses: 6/9.
- Spring 2023 Instructor undergraduate course “*ECE 430 - Systems Programming*”, Undergraduate course, School of Electrical, Computer and Biomedical Engineering, SIU. Evaluation: Course: 5/5, Instructor: 5/5, Responses: 3/11.
- Fall 2022 Instructor undergraduate course “*ECE 511 - Software/Hardware Co-design for Deep Neural Networks*”, Graduate course, School of Electrical and Computer Engineering, SIU. Evaluation: Course: 4.89/5, Instructor: 4.89/5, Responses: 9/11.

- Fall 2022 Instructor undergraduate course "*ECE 432 - Parallel Programming*", Undergraduate course, School of Electrical and Computer Engineering, SIU.
Evaluation: Course: 4.67/5, Instructor: 5/5, Responses: 3/8.
- Spring 2022 Instructor undergraduate course "*ECE 329 - Computer Organization & Design*", Undergraduate course, School of Electrical and Computer Engineering, SIU.
Evaluation: Course: 4.0/5, Instructor: 4.0/5, Responses: 1/9.
- Spring 2022 Instructor undergraduate course "*ECE 430 - Systems Programming*", Undergraduate course, School of Electrical, Computer and Biomedical Engineering, SIU.
Evaluation: Course: 4.8/5, Instructor: 5/5, Responses: 3/12.
- Fall 2021 Instructor undergraduate course "*ECE 432 - Parallel Programming*", Undergraduate course, School of Electrical and Computer Engineering, SIU.
Evaluation: Course: 4.2/5, Instructor: 4.25/5, Responses: 1/9.
- Fall 2021 Instructor undergraduate course "*ECE 329 - Computer Organization & Design*", Undergraduate course, School of Electrical and Computer Engineering, SIU.
Evaluation: Course: 4.2/5, Instructor: 5/5, Responses: 1/9.
- Spring 2021 Instructor undergraduate course "*ECE 321 - Introduction to Software Engineering*", Undergraduate course, School of Electrical, Computer and Biomedical Engineering, SIU.
Evaluation: Course: 2.72/5, Instructor: 2.95/5, Responses: 5/16.
- Spring 2021 Instructor undergraduate course "*ECE 430 - Systems Programming*", Undergraduate course, School of Electrical, Computer and Biomedical Engineering, SIU.
Evaluation: Course: 3.6/5, Instructor: 4.25/5, Responses: 4/13.
- Fall 2020 Instructor graduate course "*ECE 532 - Programming for Parallel Processors*", Graduate course, School of Electrical, Computer and Biomedical Engineering, SIU.
Evaluation: Course: 4.75/5, Instructor: 5/5, Responses: 8/9.
- Spring 2020 Instructor graduate course "*ECE 536 - Many-core embedded systems*", Graduate course, School of Electrical, Computer and Biomedical Engineering, SIU.
Evaluation: Course: 4.8/5, Instructor: 5/5, Responses: 4/7.
- Spring 2020 Instructor undergraduate course "*ECE 430 - Systems Programming*", Undergraduate course, School of Electrical, Computer and Biomedical Engineering, SIU.
Evaluation: Course: 4.3/5, Instructor: 4.5/5, Responses: 4/19.
- Fall 2019 Instructor undergraduate course "*ECE 432 - Parallel Programming*", Undergraduate course, School of Electrical and Computer Engineering, SIU.
Evaluation: Course: 4.5/5, Instructor: 4.6/5, Responses: 8/23.
- Fall 2019 Instructor graduate course "*ECE 532 - Programming for Parallel Processors*", Graduate course, School of Electrical and Computer Engineering, SIU.
Evaluation: Course: 5/5, Instructor: 5/5, Responses: 2/3.
- Fall 2019 Instructor undergraduate course "*ECE 321 - Introduction to Software Engineering*", Undergraduate course, School of Electrical and Computer Engineering, SIU.
Evaluation: Course: 4.6/5, Instructor: 4.4/5, Responses: 5/13.
- Spring 2019 Instructor undergraduate course "*ECE 321 - Introduction to Software Engineering*", Undergraduate course, School of Electrical and Computer Engineering, SIU.
Evaluation: Course: 4.33/5, Instructor: 4.33/5, Responses: 18/20.

- Fall 2018 Instructor undergraduate course "*ECE 432 - Parallel Programming*", Undergraduate course, School of Electrical and Computer Engineering, SIU.
Evaluation: Course: 4.62/5, Instructor: 4.76/5, Responses: 17/21.
- Fall 2018 Instructor graduate course "*ECE 532 - Programming for Parallel Processors*", Graduate course, School of Electrical and Computer Engineering, SIU.
Evaluation: Course: 4.71/5, Instructor: 5/5, Responses: 7/7.
- Fall 2018 Instructor undergraduate course "*ECE 321 - Introduction to Software Engineering*", Undergraduate course, School of Electrical and Computer Engineering, SIU.
Evaluation: Course: 4.45/5, Instructor: 4.70/5, Responses: 20/23.
- Spring 2018 Instructor undergraduate course "*ECE 321 - Introduction to Software Engineering*", Undergraduate course, School of Electrical and Computer Engineering, SIU.
Evaluation: Course: 4.56/5, Instructor: 4.44/5, Responses: 9/12.
- Fall 2017 Instructor undergraduate course "*ECE 321 - Introduction to Software Engineering*", Undergraduate course, School of Electrical and Computer Engineering, SIU.
Evaluation: Course: 5/5, Instructor: 5/5, Responses: 5/8.
- Fall 2017 Instructor undergraduate course "*ECE 432 - Parallel Programming*", Undergraduate course, School of Electrical and Computer Engineering, SIU.
Evaluation: Course: 4.82/5, Instructor: 4.82/5, Responses: 11/19.
- Fall 2017 Instructor graduate course "*ECE 532 - Programming for Parallel Processors*", Graduate course, School of Electrical and Computer Engineering, SIU.
Evaluation: Course: 4.75/5, Instructor: 4.50/5, Responses: 4/4.
- Spring 2017 Instructor graduate course "*ECE 536 - Real-time Embedded Systems*", Graduate course, School of Electrical and Computer Engineering, SIU.
Evaluation: Course: 5/5, Instructor: 4.82/5, Responses: 11/13.
- Spring 2017 Instructor undergraduate course "*ECE 430 - Principles of System programming*", Undergraduate course, School of Electrical and Computer Engineering, SIU.
Evaluation: Course: 4.53/5, Instructor: 4.58/5, Responses: 19/24.
- Fall 2016 Instructor undergraduate course "*ECE 321 - Introduction to Software Engineering*", Undergraduate course, School of Electrical and Computer Engineering, SIU.
Evaluation: Course: 4.50/5, Instructor: 4.19/5, Responses: 16/25.
- Fall 2016 Instructor undergraduate course "*ECE 432 - Parallel Programming*", Undergraduate course, School of Electrical and Computer Engineering, SIU.
Evaluation: Course: 4.33/5, Instructor: 4.60/5, Responses: 15/19.
- Fall 2016 Instructor graduate course "*ECE 532 - Programming for Parallel Processors*", Graduate course, School of Electrical and Computer Engineering, SIU.
Evaluation: Course: 5/5, Instructor: 4.90/5, Responses: 10/10.
- Spring 2016 Instructor crosslisted course "*ECE 493/593 - Special Topics in Electrical Engineering - Principles of System programming*", Undergraduate-Graduate cross-listed course, School of Electrical and Computer Engineering, SIU.
Evaluation: Course: 4.44/5, Instructor: 4.67/5, Responses: 9/19.
- Fall 2015 Instructor undergraduate course "*ECE 321 - Introduction to Software Engineering*", Undergraduate course, School of Electrical and Computer Engineering, SIU.
Evaluation: Course: 4.18/5, Instructor: 4.50/5, Responses: 17/20.

- 2010-2014 Teaching assistant “*Embedded Systems*”, Semester 9th, School of Electrical and Computer Engineering, NTUA.
- 2009-2013 Lab assistant “*Microprocessors Lab*”, Semester 7th, School of Electrical and Computer Engineering, NTUA.
- 2009-2011 Lab assistant “*Digital VLSI systems*”, Semester 8th, School of Electrical and Computer Engineering, NTUA.

Service & Leadership Roles

University service

- Vice Chair of SIU Graduate Council, 2025 - present.
- Chair of Programs Committee in SIU Graduate Council, 2023 - 2025.
- SIU Graduate Council Committee Member, 2021 - present.
- Graduate Affairs Committee member of School of Electrical, Computer and Biomedical Engineering, 2021 - present.
- Computer Engineering Committee member of School of Electrical, Computer and Biomedical Engineering, 2021 - present.

Community service

- Workshop organizer: *International Workshop on Resource-Constrained Machine Learning: Unlocking the potentials of edge computing devices and networks*, co-hosted with IEEE International Conference on High Performance Switching and Routing (HPSR) 2023.
- Special Session organizer: *Approximate Computing: From circuit design to system integration*, IEEE International Symposium on Quality Electronic Design (ISQED) 2022.
- Invited Session organizer: *Approaches and Methods for Monitoring and Management of Edge Computing Systems and Networks*, IEEE International Conference on High Performance Switching and Routing (HPSR) 2022.
- Review Editor on the Editorial Board of *Frontiers in Communications and Networks* journal.
- Member of IEEE CAS Sensory Systems Technical Committee (SSTC).
- Member of IEEE CAS Multimedia Systems & Applications Technical Committee (MSATC).
- IEEE Industry Applications Society (IAS) as IEEE IAS CMD Thesis Contest Evaluator.

Conference Program Committees

2026:

- ACM/IEEE Design Automation Conference (DAC), EDA3. Timing Analysis and Optimization, Technical Program Committee Member.
- IEEE International Symposium on Quality Electronic Design (ISQED), System-level Design and Methodologies, Technical Program Committee.
- ACM/IEEE Design, Automation and Test in Europe Conference (DATE), Autonomous Systems and Smart Industry, Technical Program Committee Member.
- ACM/IEEE Asia and South Pacific Design Automation Conference (ASP-DAC), Approximate, Bio-inspired and Neuromorphic Computing, Technical Program Committee Member.

2025:

- IEEE Computer Society Annual Symposium on VLSI (ISVLSI), Special Session: "Repurposing EDA for Unlocking Emerging Technologies," Program Committee Member.
- IEEE International Conference on Electronics Circuits and Systems (ICECS), Technical Program Committee Member.
- IEEE International Conference on Microelectronics (ICM), Technical Program Committee Member.
- IEEE Symposium on Computers and Communications (ISCC), Technical Program Committee Member.
- IEEE International Conference on Wireless and Mobile Computing, Networking and Communications (WiMob), Technical Program Committee Member.
- IEEE/ACM International Conference on Computer-Aided Design (ICCAD), Technical Program Committee Member.
- ACM Great Lakes Symposium on VLSI (GLSVLSI), VLSI Circuits and Design, Technical Program Committee Member.
- ACM/IEEE Workshop on Machine Learning for CAD (MLCAD), Technical Program Committee.
- IEEE Global Communications Conference (GLOBECOM), Technical Program Committee Member.
- IEEE Vehicular Technology Conference (VTC), Emerging Technologies, 6G, and Beyond, Technical Committee Member.
- IEEE/ACM International Symposium on Low Power Electronics and Design (ISLPED), Systems and Platforms, Technical Committee Member.
- ACM/IEEE Asia and South Pacific Design Automation Conference (ASP-DAC), Approximate, Bio-inspired and Neuromorphic Computing, Technical Program Committee Member.
- IEEE International Conference on Omni-layer Intelligent systems (COINS), Internet of Things (IoT): From Edge to Cloud, Technical Committee Member.
- IEEE Wireless Communications and Networking Conference (WCNC), Technical Program Committee Member.
- IEEE International Symposium on Quality Electronic Design (ISQED), Circuit Design, 3D Integration and Advanced Packaging (ICAP), Technical Program Committee Member.

2024:

- IEEE Global Communications Conference (GLOBECOM), Technical Program Committee Member.
- IEEE/ACM International Conference on Computer-Aided Design (ICCAD), New Computing Paradigm, Technical Program Committee Member.
- IEEE International Conference on Omni-layer Intelligent systems (COINS), Circuits and Systems (CAS) Designs for AIoT, Technical Committee Member.
- ACM Great Lakes Symposium on VLSI (GLSVLSI), Technical Program Committee Member.
- ACM/IEEE Workshop on Machine Learning for CAD (MLCAD), Technical Program Committee.
- IEEE Symposium on Computers and Communications (ISCC), Technical Program Committee Member.
- IEEE International Symposium on Quality Electronic Design (ISQED), Circuit Design, 3D Integration and Advanced Packaging (ICAP), Technical Program Committee Member.

2023:

- ACM/IEEE Asia and South Pacific Design Automation Conference (ASP-DAC), Technical Program Committee Member.
- IEEE Global Communications Conference: Green Communication Systems and Networks (GLOBECOM GCSN), Technical Program Committee Member.
- IEEE International Conference on High Performance Switching and Routing (HPSR), Technical Program Committee Member.
- IEEE Symposium on Computers and Communications (ISCC), Technical Program Committee Member.
- ACM/IEEE Workshop on Machine Learning for CAD (MLCAD), Technical Program Committee.
- IEEE International Conference on Omni-layer Intelligent systems (COINS), Circuit and system design for IoT, AI and big data, Technical Committee Member.
- ACM Great Lakes Symposium on VLSI (GLSVLSI), IoT and Smart Systems Track, Technical Program Committee Member.
- ACM/IEEE Asia and South Pacific Design Automation Conference SIGDA Student Research Forum (SRF@ASP-DAC 2023), Technical Program Committee Member.
- IEEE International Symposium on Quality Electronic Design (ISQED), Technical Program Committee Member.

2022:

- ACM/IEEE Design Automation Conference (DAC), AI/ML System Design, Technical Program Committee Member.
- ACM Great Lakes Symposium on VLSI (GLSVLSI), VLSI Design Track, Technical Program Committee Member.
- IEEE Global Communications Conference: Green Communication Systems and Networks (GLOBECOM GCSN), Technical Program Committee Member.
- IEEE International Conference on Electronics Circuits and Systems (ICECS), Technical Program Committee Member.
- IEEE International Conference on Computer Communications and Networks (ICCCN), Technical Program Committee Member.
- ACM/IEEE Workshop on Machine Learning for CAD (MLCAD), Technical Program Committee.
- IEEE Symposium on Computers and Communications International (ISCC), Technical Program Committee Member.
- ACM/IEEE Asia and South Pacific Design Automation Conference (ASP-DAC), Technical Program Committee Member.
- IEEE International Symposium on Quality Electronic Design (ISQED), Technical Program Committee Member.
- IEEE International Symposium on Circuits and Systems (ISCAS), Reviewer Committee Member.
- IEEE International Conference on Omni-layer Intelligent systems (COINS), Circuits and Systems Designs for Artificial Intelligence and the Internet of Things track, Technical Committee Member.

2021:

- ACM/IEEE Workshop on Machine Learning for CAD (MLCAD), Technical Program Committee.
- IEEE Symposium on Computers and Communications (ISCC), Technical Program Committee Member.

- ACM/IEEE Design Automation Conference (DAC), AI/ML System Design, Technical Program Committee Member.
- ACM/IEEE Asia and South Pacific Design Automation Conference (ASP-DAC), Technical Program Committee Member.
- IEEE Asia Pacific Conference on Circuits and Systems (APCCAS), Technical Program Committee Member.
- ACM Great Lakes Symposium on VLSI (GLSVLSI), VLSI Design Track, Technical Program Committee Member.
- IEEE International Symposium on Quality Electronic Design (ISQED), Circuit Design, 3D Integration and Advanced Packaging (ICAP), Technical Program Committee Member.
- IEEE International Symposium on Circuits and Systems (ISCAS), Reviewer Committee Member.

2020:

- ACM/IEEE Workshop on Machine Learning for CAD (MLCAD), Technical Program Committee.
- ACM/IEEE Design Automation Conference (DAC), AI/ML System Design, Technical Program Committee.
- IEEE International Symposium on Circuits and Systems (ISCAS), Reviewer Committee Member.
- IEEE International Conference on Electronics Circuits and Systems (ICECS), Technical Program Committee Member.
- IEEE International Symposium on Embedded Multicore/Many-core Systems-on-Chip (MCSoc), Program Committee Member.
- ACM Great Lakes Symposium on VLSI (GLSVLSI), Program Committee Member.
- IEEE International Symposium on Quality Electronic Design (ISQED), IoT - Design & Smart Sensors, Technical Program Committee Member.

2019:

- IEEE International New Circuits and Systems Conference (NEWCAS), Neural Networks and Neuromorphic Circuits, Reviewer Committee Member.
- IEEE International Conference on Electronics Circuits and Systems (ICECS), Digital Circuits and Embedded Systems, Technical Program Committee Member.
- IEEE International Symposium on Embedded Multicore/Many-core Systems-on-Chip (MCSoc), Embedded Multicore/Manycore SoC Architectures, Technical Program Committee Member.
- ACM Great Lakes Symposium on VLSI (GLSVLSI), VLSI Design, Technical Program Committee Member.

2018:

- IEEE International Conference on Omni-layer Intelligent systems. (COINS), Internet of Things: From Device, to Edge, and Cloud, Technical Program Committee Member.
- IEEE/ACM International Workshop on Network on Chip Architectures (NoCArc), Technical Program Committee Member.
- IEEE International Conference on Very Large Scale Integration (VLSI-SoC), Digital architectures: NoC, multi- and many-core, hybrid, and reconfigurable, Technical Program Committee Member.
- IEEE International Conference on Electronics Circuits and Systems (ICECS), Digital Circuits and Embedded Systems, Technical Program Committee Member.

- ACM Great Lakes Symposium on VLSI (GLSVLSI), VLSI Design, Technical Program Committee Member.

2017:

- ACM Great Lakes Symposium on VLSI (GLSVLSI), VLSI Systems Track, Technical Program Committee Member.
- IEEE Computer Society Annual Symposium on VLSI (ISVLSI), System Design and Security Track, Technical Program Committee Member.

2016:

- ACM Great Lakes Symposium on VLSI (GLSVLSI), VLSI Systems Track, Technical Program Committee Member.
- IEEE/ACM International Workshop on Network on Chip Architectures (NoCArc), Technical Program Committee Member.

Session Chair
in conferences

- IEEE Computer Society Annual Symposium on VLSI (ISVLSI), 2025. Session name: Repurposing EDA for Unlocking Emerging Technologies.
- ACM/IEEE International Conference on Computer-Aided Design (ICCAD), 2024. Session name: Dive into the Design Space for Design Automation.
- ACM/IEEE International Conference on Computer-Aided Design (ICCAD), 2024. Session name: When Diverse Architectures Meet Diverse AIs.
- ACM/IEEE Design Automation Conference (DAC), 2022. Session name: Do Not Forget the Software: Bare Metal Neural Acceleration is no fun without it.
- ACM/IEEE Design Automation Conference (DAC), 2022. Session name: Embedded Systems in the Age of AI - Smart(er) Tools and Frameworks.
- IEEE International Symposium on Quality Electronic Design (ISQED), 2022. Session name: Energy Efficiency with Emerging Technologies for the Edge and the Cloud.
- IEEE International Conference on High Performance Switching and Routing (HPSR), 2022. Session name: Approaches and Methods for Monitoring and Management of Edge Computing Systems and Networks.
- ACM/IEEE Design, Automation and Test in Europe Conference (DATE), 2022. Session name: Energy Efficiency with Emerging Technologies for the Edge and the Cloud.
- ACM/IEEE Design Automation Conference (DAC), 2021. Session name: DES4-I Memory - The Workhorse of Machine Learning.
- ACM/IEEE Asia and South Pacific Design Automation Conference (ASP-DAC), 2021. Session name: 3D Stochastic and Approximate Computing.
- IEEE International Conference on Electronics Circuits and Systems (ICECS), 2018. Session name: Memory Management Schemes.

Presentations/Lectures/Panels

- *"A Vertical Approach to Designing and Managing Sustainable Heterogeneous Edge Data Centers,"* Invited talk, School of Applied and Creative Computing, Purdue University, 2025.
- *"A Vertical Approach to Designing and Managing Sustainable Heterogeneous Edge Data Centers,"* Paper presentation, IEEE Computer Society Annual Symposium on VLSI (ISVLSI), Kalamata Greece, 2025.

- *"Carbon-Efficient 3D DNN Acceleration: Optimizing Performance and Sustainability,"* Paper presentation, IEEE Computer Society Annual Symposium on VLSI (ISVLSI), Kalamata Greece, 2025.
- *"Less is More: Optimizing Function Calling for LLM Execution on Edge Devices,"* Paper presentation, ACM/IEEE Design, Automation, and Test in Europe Conference (DATE), Lyon France, 2025.
- *"RankMap: Priority-Aware Multi-DNN Manager for Heterogeneous Embedded Devices,"* Paper presentation, ACM/IEEE Design, Automation, and Test in Europe Conference (DATE), Lyon France, 2025.
- *"MapFormer: Attention-based multi-DNN manager for throughput & power co-optimization on embedded devices,"* Paper presentation, ACM/IEEE International Conference on Computer-Aided Design (ICCAD), New Jersey USA, 2024.
- *"Advancing the customization of edge-based systems for AI applications,"* Research presentation, IEEE Smart-Plant Seasonal School, 2023.
- *"Round Table on AI,"* Panelist, SIU Technology and Innovation Expo, St. Louis, MO, 2023.
- *"Automated Energy-Efficient DNN Compression under Fine-Grain Accuracy Constraints,"* Research presentation, DATE 2023 Conference, Antwerp Belgium, 2023.
- *"A Pressure-Aware Policy for Contention Minimization on Multi-core Systems,"* Invited talk, HiPEAC 2023 Conference, Toulouse France, 2023.
- *"Exploration of error resilience of neural networks towards energy reduction,"* Research presentation, Department of Electrical Engineering , University of Minnesota Duluth, 2022.
- *"Advancing the customization and unlocking the potentials of future computing systems,"* Research presentation, Department of Computer Science, KIT Karlsruhe, 2021.
- *"Unlocking the potentials of future computing systems: SIU Embedded Systems Software Lab,"* Research presentation, School of Electrical and Computer Engineering, National technical University of Athens, 2020.
- *"Optimizing Performance of GPU Applications with SM Activity Divergence Minimization,"* Paper presentation, ICECS conference, 2018.
- *"DROP: Distributed Run-Time and Power Constraint Mapping for Many-Core Systems,"* Paper presentation, ICECS conference, 2018.
- *"Workload-aware Resource Management Targeting Internet-of-Things,"* Presentation, Huawei IoT Midwest Research Summit, 2018.
- *"Fog Computing and Efficient Resource Management in the era of Internet-of-Video Things (IoVT),"* Paper presentation, ISCAS conference, 2018.
- *"Weather-based road condition estimation in the era of Internet-of-Vehicles (IoV),"* Paper presentation, ISCAS conference, 2018.
- *"A multi-agent based system for run-time distributed resource management,"* Paper presentation, ISCAS conference, 2017.
- *"Performance-aware resource management of multi-threaded applications on many-core systems,"* Paper presentation, GLSVLI conference, 2017.
- *"Distributed Run-time Management for Multi-agent System,"* Project presentation, FORD Motors Company, Dearborn MI, 2016.
- *"Distributed run-time resource management for malleable applications on many-core platforms,"* Paper presentation, DAC conference, 2013.
- *"A Divide and Conquer based Distributed Run-time Mapping Methodology for Many-Core platforms,"* Paper presentation, DATE conference, 2012.

- “SPARTAN project: Efficient implementation of computer vision algorithms onto reconfigurable platform targeting to space applications,” Paper presentation, 6th International Workshop on Reconfigurable Communication-centric Systems-on-Chip (ReCoSoC), 2011.
- “Parallel programming and run-time resource management framework for many-core platforms: The 2PARMA approach,” Paper presentation, 6th International Workshop on Reconfigurable Communication-centric Systems-on-Chip (ReCoSoC), 2011.
- “Mapping Optimisation for Scalable multi-core ARchiTecture: The MOSART approach,” Paper presentation, IEEE Computer Society Annual Symposium on VLSI (IS-VLSI) 2010.
- “Systematic Exploration of Energy-Efficient Application-Specific Network-on-Chip Architectures,” Paper presentation, IEEE Computer Society Annual Symposium on VLSI (IS-VLSI) 2010.
- “A High-Level Mapping Algorithm Targeting 3D NoC Architectures with Multiple Vdd,” Paper presentation, IEEE Computer Society Annual Symposium on VLSI (IS-VLSI) 2010.
- “Microcoded Dynamic Memory allocation for Multi-core Networks-on-Chip,” Poster presentation, HiPEAC ACACES summer school, 2010.
- “Temperature-Aware Platform Optimizations for 2D and 3D Networks-on-Chip,” Paper presentation, 4^o National Conference of Electrical and Computer Engineering, 2010.
- “Node Resource Management for DSP Applications on 3D Network-on-Chip architectures,” Poster presentation, 16th International Conference on Digital Signal Processing (DSP), 2009.
- “Three Dimensional FPGA Architectures: A Shift Paradigm for Energy-Performance Efficient DSP Implementations,” Paper presentation, 16th International Conference on Digital Signal Processing (DSP), 2009.

Released Software

- **SNN exploration on SpiNNaker neuromorphic hardware**, a tool that extends the SNN conversion toolbox (SNN-TB) and performs efficient exploration of the hardware dependent parameters of the SpiNNaker neuromorphic platform. The goal is to achieve the highest possible accuracy on the SpiNNaker board for a given SNN architecture.
https://github.com/embeddedlabsiu/snn_exploration_spinnaker
- **BACH scheduler**, a bandwidth and cache aware scheduler for Intel based architectures. BACH is part of a run-time system that orchestrates the execution of multi-threaded applications by incorporating user-defined scheduling policies. It operates in user-space on top of Linux-based operating systems.
https://github.com/embeddedlabsiu/BACH_scheduler
- **Adaptive Approximate Computing on CGRAs**, a framework for bridging approximate computing with coarse grain reconfigurable arrays. Each tile hosts a combination of exact and multiple approximate units (multipliers and adders).
<https://github.com/embeddedlabsiu/adaptive-approximate-computing>

- **DRTRM**, a Distributed Run-Time Resource Management framework for parallel applications on many-core systems. The target platform of DRTRM, is Intel Single Chip Cloud Computer (SCC), although the design is intended for portability. In addition, it can be compiled to simulate execution of a many-core system, using a process per core on a Linux system. DRTM was developed in collaboration with the Microprocessors and Digital Systems Lab from National Technical University of Athens.
